[Note] 1. Create a table for each undergraduate and graduate school.

- When a facility is being used jointly by multiple schools and/or a junior college, record it separately from the dedicated facilities for each undergraduate and graduate school and indicate this in the "Exclusive/Shared" column. In the "Student Total" column, enter a value that includes the students of the schools and/or junior colleges sharing the facility. However, do not enter this information for facilities shared with graduate schools. Therefore, when calculating "Area per Enrolled Student," exclude the number of graduate students. When calculating "Area per Enrolled Student," do not include the number of students enrolled in the nighttime primary course of a daytime and nighttime enrollment system or a secondary section (nighttime) that does not possess specific facilities.
- When facilities are shared on each campus, enter the name of the campus in the "Undergraduate, Graduate School" column.
- When all of the facilities on a campus are shared, enter "shared throughout the university" in the "Undergraduate, Graduate School" column.
- If there is a facility dedicated to general education, record this according to the school.
- When calculating "Area per Enrolled Student," round up at the second decimal place.
- When calculating the "Area per Enrolled Student" for lecture halls and seminar rooms used jointly with other schools, divide the total area of the facility by the number of students of all schools using the facility (including students enrolled at a junior college if it is used by a junior college).
