[Note] 1. Create a table for each undergraduate and graduate school.

- When a facility is being used jointly by multiple schools, graduate schools and/or a junior college, record it separately from the dedicated facilities for each undergraduate and graduate school and indicate this in the "Exclusive/Shared" column. In the "Student Total" column, enter a value that includes the students of the schools, graduate schools and/or a junior college sharing the facility.
- When facilities are shared on each campus, enter the name of the campus in the "Undergraduate, Graduate School" column.
- When all of the facilities on a campus are shared, enter "shared throughout the university" in the "Undergraduate, Graduate School" column.
- If there is a facility dedicated to general education, record this according to the school.
- When calculating "Area per Enrolled Student," round it off to two decimal places.
- When calculating the "Area per Enrolled Student" for lecture halls and seminar rooms used jointly with other schools and/or graduate schools, divide the total area of the facility by the number of students of all schools and/or graduate schools using the facility (including students enrolled at a junior college if it is used by the junior college).
